

Instructions For Use

Use Arnold Performance After Run Oil when your engine sits for more than two weeks between runs. The instructions below are purely guidelines, and how we use the product.

1. After your final run before storage, let the motor completely cool, being sure it is at bottom dead center.
2. Once cool, remove the glow plug.
3. Add a 4-6 drops of after-run oil into the glow plug hole.
4. Rotate the engine back and forth by hand, either by the flywheel or propeller/spinner. No need to turn it over completely.
5. Reinstall the glow plug
6. Before racing or returning to normal operation, run approximately 1/2 tank of fuel through the engine to burn off any excess oil. The engine may run a little rich or smoke a little more than normal during this burn off.

DANGER: HARMFUL OR FATAL IF SWALLOWED. COMBUSTIBLE. Contains petroleum distillates. If swallowed, do not induce vomiting. Contact a physician immediately. Keep away from open spark or flame. Avoid frequent and prolonged contact with skin. Use in a well ventilated area. KEEP OUT OF REACH OF CHILDREN.
